

# Cusp Fracture – Root Canal – Direct Post & Core

When a tooth is fractured deeply, damaging the pulp, a root canal is required. The steps below demonstrate the direct post and core restoration used in conjunction with a crown restoration.

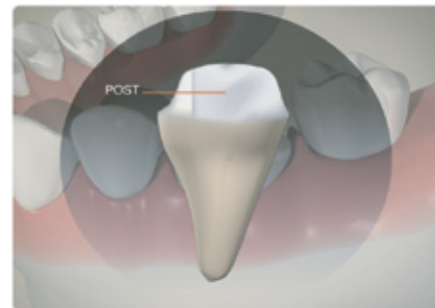

Your dentist or hygienist, will be able to answer any questions you have about this procedure.

1. GUTTA-PERCHA REPLACES THE PULP TO KEEP TOOTH STRONG.

2. THE DIRECT POST IS CEMENTED IN PLACE.

3. THE TOOTH IS PREPARED FOR THE CROWN.

4. THE CROWN IS CUSTOM MADE AT THE DENTAL LAB.

5. FINAL CROWN IS CEMENTED IN PLACE.
